SUMMARY

Flutter & AI Powered App Developer with 4+ years shipping production systems for enterprise clients. I've built apps used by 20,000+ employees from an NFC-based fraud prevention system to AI-powered assistants using MCP servers. My stack covers Flutter, React Native, Go, and ASP.NET Core, with hands-on DevOps running CI/CD on self-hosted infrastructure.

EXPERIENCE

Software Developer — KDS Group

Jun 2022 – Present

Full-stack mobile and infrastructure engineer building enterprise applications across HR, manufacturing, and analytics for **20,000+ employees**.

- **KDS Portal:** Built a Flutter-based HRMS app integrated with ERP for employee self-service (attendance, leave, salary, loans). Improved HR processing speed by 40%.
- **KDS Zakat:** Built an NFC-based Zakat distribution system in Flutter with offline-first architecture, background sync, and real-time SignalR updates — reducing fraudulent distributions by 99.99% across 20,000+ employees.
- **KDS QMS:** Created a React Native quality control system for garment factory inspections, with a web dashboard built on Angular. Enhanced defect tracking and reporting analytics, cutting inspection delays by 80%.
- **KDS TLS:** Built a real-time Traffic Light System in React Native for the garment industry — operators log machine assignments, styles, and operator performance (Red/Yellow/Green) with defect tracking on the production floor. Extended the system with an AI-powered Next.js assistant backed by an MCP server, allowing managers to query live production and performance data in natural language directly from the database.
- **KDS TPM:** Built a Flutter-based Total Productive Maintenance app for tracking breakdown and scheduled maintenance workflows. Workers log machine issues in real-time and track full resolution lifecycle — from issue raised to fix confirmed — giving management visibility into maintenance activity and reducing untracked machine downtime.

- **DevOps & Infrastructure:** Migrated all production servers from Windows to Ubuntu, architecting a dual-server setup that reduced downtime by 50%. Implemented GitLab CI/CD pipelines with Docker so the entire team deploys to production with a single git push — replacing a fully manual process. Set up Prometheus and Grafana for real-time monitoring across all services.
- **Microservices:** Built a self-hosted file storage and CDN platform using Go (Fiber) and ASP.NET Core, consolidating all company assets — images, PDFs, logos — into a single, centralized system. Every internal app now loads assets from the CDN instead of bundling them locally, reducing app size and standardizing asset delivery across the entire organization. Also built internal Mailing and Push Notification microservices now used across all company applications.

Front-end Engineer — Trigan

Feb 2022 – Jun 2022

Developed the Next.js-based main website for Trigan.org, focusing on responsiveness and SEO optimization.

Software Engineer Intern — ZorgIT Group

Dec 2021 – Feb 2022

Developed a modern portfolio website for Arcon Interior to boost brand reach and client engagement.

EDUCATION

B.Sc. in Computer Science & Engineering

Chattogram Premier University — Fall 2016 – Jun 2021

GPA: 3.21

Final Project: P2P loan platform built with Laravel (backend) and Next.js (frontend) for secure, direct lending.

PROJECTS

Quotely – Quote & Fact App (*Flutter + ASP.NET Core + Firebase*)

Published app delivering daily quotes and notifications. [Play Store](#)

AI Persona – Character Chat (*Flutter + Gemini + Firebase*)

LLM-powered character chat app with personality profiles and themes. [Play Store](#)

PinPoint – Privacy-First Notes App (*Flutter + ASP.NET Core*)

Feature-rich, privacy-focused note-taking app with a backend API. [Play Store](#)

Health_Box – Smart Medical Record App (*Flutter + Drift + Google Drive*)

Offline-first encrypted medical record manager with AI-based health insights. [GitHub](#)

Vibe Journal – AI Mood Journal (*Flutter + Gemini API + Firebase*)

Converts speech to text and derives mood analytics using AI sentiment detection. [GitHub](#)

RustyPotato – Redis-Compatible KV Store (*Rust*)

High-performance Redis-compatible database achieving over 1M ops/sec. [GitHub](#)

Tiny_State – State Management Library (*Dart*)

Lightweight reactive Flutter state manager published on pub.dev. [GitHub](#)

AI & AUTOMATION

- Built production AI assistants for enterprise systems serving 20,000+ employees using OpenAI, Gemini, and Claude APIs.
 - Built an MCP server architecture enabling non-technical users to query live PostgreSQL production data using natural language — no SQL required.
 - Automated daily report generation and data enrichment pipelines using Hangfire, processing 50,000+ records/day.
-

SKILLS

Languages: Dart, TypeScript, JavaScript, Go, C#, Rust, Python, SQL

Frameworks: Flutter, React Native, Next.js, Node.js, ASP.NET Core

DevOps: Docker, GitLab CI/CD, Prometheus, Grafana, Nginx

Cloud: Firebase (Auth, Firestore, Functions), PostgreSQL, REST, SignalR

AI Tools: OpenAI, Gemini, Claude, DeepSeek, Speech/Text APIs

Game & IoT: Flame Engine, Arduino, Raspberry Pi, NFC, Barcode

HIGHLIGHTS

- Available for remote work globally, UTC+6, flexible on overlap hours
- Open-source contributor, “Tiny State” state management library published on pub.dev
- Self-managed DevOps, fully architecting and maintaining production infrastructure independently
